

a scrubbing medium carried by the housing,

a valve carried by the housing for providing communication between the reservoir and the scrubbing medium and having a valve stem extending through the reservoir,

a cap forming a top wall of the housing for closing the open top of the housing and having an opening therein for receiving the valve stem, and

a flexible and resilient seal member covering the cap and providing a fluid-tight seal around the opening therein while accommodating manual actuation of the valve stem from above the cap.

10. (Amended) A fluid-containing cleaning device comprising:

an open-top housing defining a fluid reservoir,

a scrubbing medium carried by the housing,

a valve carried by the housing for providing communication between the reservoir and the scrubbing medium and having a valve stem extending through the reservoir,

an actuator member connected to said valve stem,

a cap forming a top wall of the housing for closing the open top of the housing and having an opening therein for receiving the actuator member, and

a flexible and resilient member covering the cap and providing a fluid-tight seal around the opening therein while accommodating manual actuation of the actuator member from above the cap.
